

EC-50 | External Synchronizer

Description

- The wireless infrared frequency synchronizer EC-50 is a reliable and convenient device that extends the infrared synchronization function of the receiver to a reachable location. Even if the receiver is installed in a concealed location, simply placing the microphone close to the EC-50 and it will synchronize the frequency with the receiver. After the synchronization is completed, the EC-50 will make a "deedee" sound to confirm the setting is successful.

Product Specification

Working Mode:	MCU control
Infrared Frequency:	32KHz
Power Supply:	DC 12V
Normal Working Current:	50mA
Size(mm):	85×85×35
Weight:	65g
